

IT Department Talent Development

Strengthening the Skill Foundation & Global Expansion

Overview

Reflecting on our past skill development initiatives and incorporating Lessons Learned, we are taking on two challenges over the next 3 years: Strengthening the Skill Foundation and Global Expansion.

Past Reflection

Lessons Learned

Two Upcoming Challenges

Lessons Learned

We reflect on past skill development efforts to apply the insights gained to our future initiatives.

Visualization and standardization of skills are prerequisites for placement, training, and hiring decisions.

Scattered talent data makes it difficult to understand the organization overall skill status and to plan effectively.

If learning is disconnected from evaluation and careers, individual growth is hard to reflect in the system.

Adopting a common framework (e.g., SFIA) enables dialogue across regions and roles.

Strategic Background (SWOT Analysis)

Aligning rapid changes in the external environment with current internal challenges.

INTERNAL

Strengths (S)

- Accumulated skill development efforts
- Lessons Learned base and high motivation

Weaknesses (W)

- Silos across regions
- Data disconnect, lack of a common language (SFIA)

EXTERNAL

Opportunities (O)

- Rapid advancement of GenAI and related technologies
- Acceleration of global knowledge sharing

Threats (T)

- Severe shortage of IT talent
- Accelerated speed of technological change

Strategy Derivation (Cross SWOT Analysis)

1. External Factors

The market will not wait (Force for change)

機会 (O): Rapid advancement of GenAI and related technologies / Acceleration of global knowledge sharing
脅威 (T): Severe shortage of IT talent / Accelerated speed of technological change

2. Internal Factors

Fragmented systems have reached their limits (Cannot win as is)

強み (S): Accumulated skill development efforts
弱み (W): Silos across regions / Data disconnect, lack of a common language (SFIA)

3. Cross Analysis

To leverage strengths, overcome weaknesses, and seize opportunities, we must steer towards the Two Challenges.

Unifying the Foundation and Global Integration are essential

Two Challenges for the Next 3 Years

Based on the SWOT analysis, we have identified the following two pillars as our top priorities.

1. Skill Foundation Strengthening

- ✓ Update the skill inventory and adopt SFIA 9
- ✓ Enhance skill assessment, visualization, and learning platforms
- ✓ Integrate with the talent management system

2. Global Expansion

- ✓ Expand talent development to North America and EMEA
- ✓ Build consensus on optimal talent placement per region
- ✓ Lay the foundation for cross-regional career ladders and job challenge programs

Challenge 1 — Skill Foundation Strengthening

1

Update the skill inventory and
adopt SFIA 9

2

Strengthen skill assessment,
visualization, and learning
platforms

3

Integrate with the talent
management system to
centralize talent data

Challenge 2 — Global Expansion

1

Expand talent development activities, previously limited to Japan, to North America & EMEA

2

Reach a consensus on optimal talent placement for each region

3

Establish the foundation for cross-regional career ladders and job challenge systems

What is SFIA? (Skills Framework for the Information Age)

SFIA defines the skills and competencies required by professionals who design, develop, implement, manage, and protect the technology that powers the digital world. It is a globally adopted common framework.

Defines capabilities via 7 levels of responsibility and professional skills

Covers diverse roles including software engineering, data science, and cybersecurity

Adopted in ~200 countries by governments, enterprises, and individuals (SFIA 9 released October 2024)

SFIA 9

Global Standard
Released Oct 2024

Roadmap — Current Term Goals

Current Term Goals

Launch of each initiative

**Construction of the talent
database**

**Realize near real-time
updates for the skill
inventory**

Summary: Talent Development Strategy

Item	Content
WHY (Background & Purpose)	Existing improvements are insufficient due to rapid external changes (GenAI advancement, IT talent shortage) and internal issues (regional silos, data disconnect), requiring fundamental transformation.
WHAT (Goals & Challenges)	Take on two top-priority challenges over the next 3 years: 1. Strengthening the Skill Foundation and 2. Global Expansion.
HOW (Execution Approach)	Adopt the global standard SFIA 9 to integrate assessment, visualization, learning, and talent management, expand to North America/EMEA, and build cross-regional career ladders and job challenge programs.
