IT Department Budget Guidelines: Supplement

IT Budget Transfer Essentials

November 2026 Kickoff

About This Document

Explains the approach and handling of frequently asked topics on the budget transfer, clearly and without misunderstanding

Purpose	This document illustrates the approach and handling of topics often raised about the budget transfer. It adds the background that individual answers cannot easily convey, so that everyone understands it correctly.
Relation to Q&A list	Individual questions and answers are kept in the Q&A list. This document sets out the thinking behind them. Please refer to both as needed.
How to use	GDS transfer leads can use it when talking with their business counterparts, so both sides look at the same picture and align. It can also help you check your own understanding.
Updates	We will add to and update this document as questions come in. Please see the revision history for changes.

Contents

Page	Topic	Summary
p.5	November–December Schedule	Tasks for Assigned BPs and S&G (FinanceBP), milestones and definitions of done
p.6	Roles After the Transfer (RACI)	Roles of GDS and the Functions in the IT domain
p.7	Alternative: Roles for Function-Specific Cases	When roles switch for cases confined to one Function
p.8	Fixed Assets Move to GDS	Transfer timing and approach by asset status

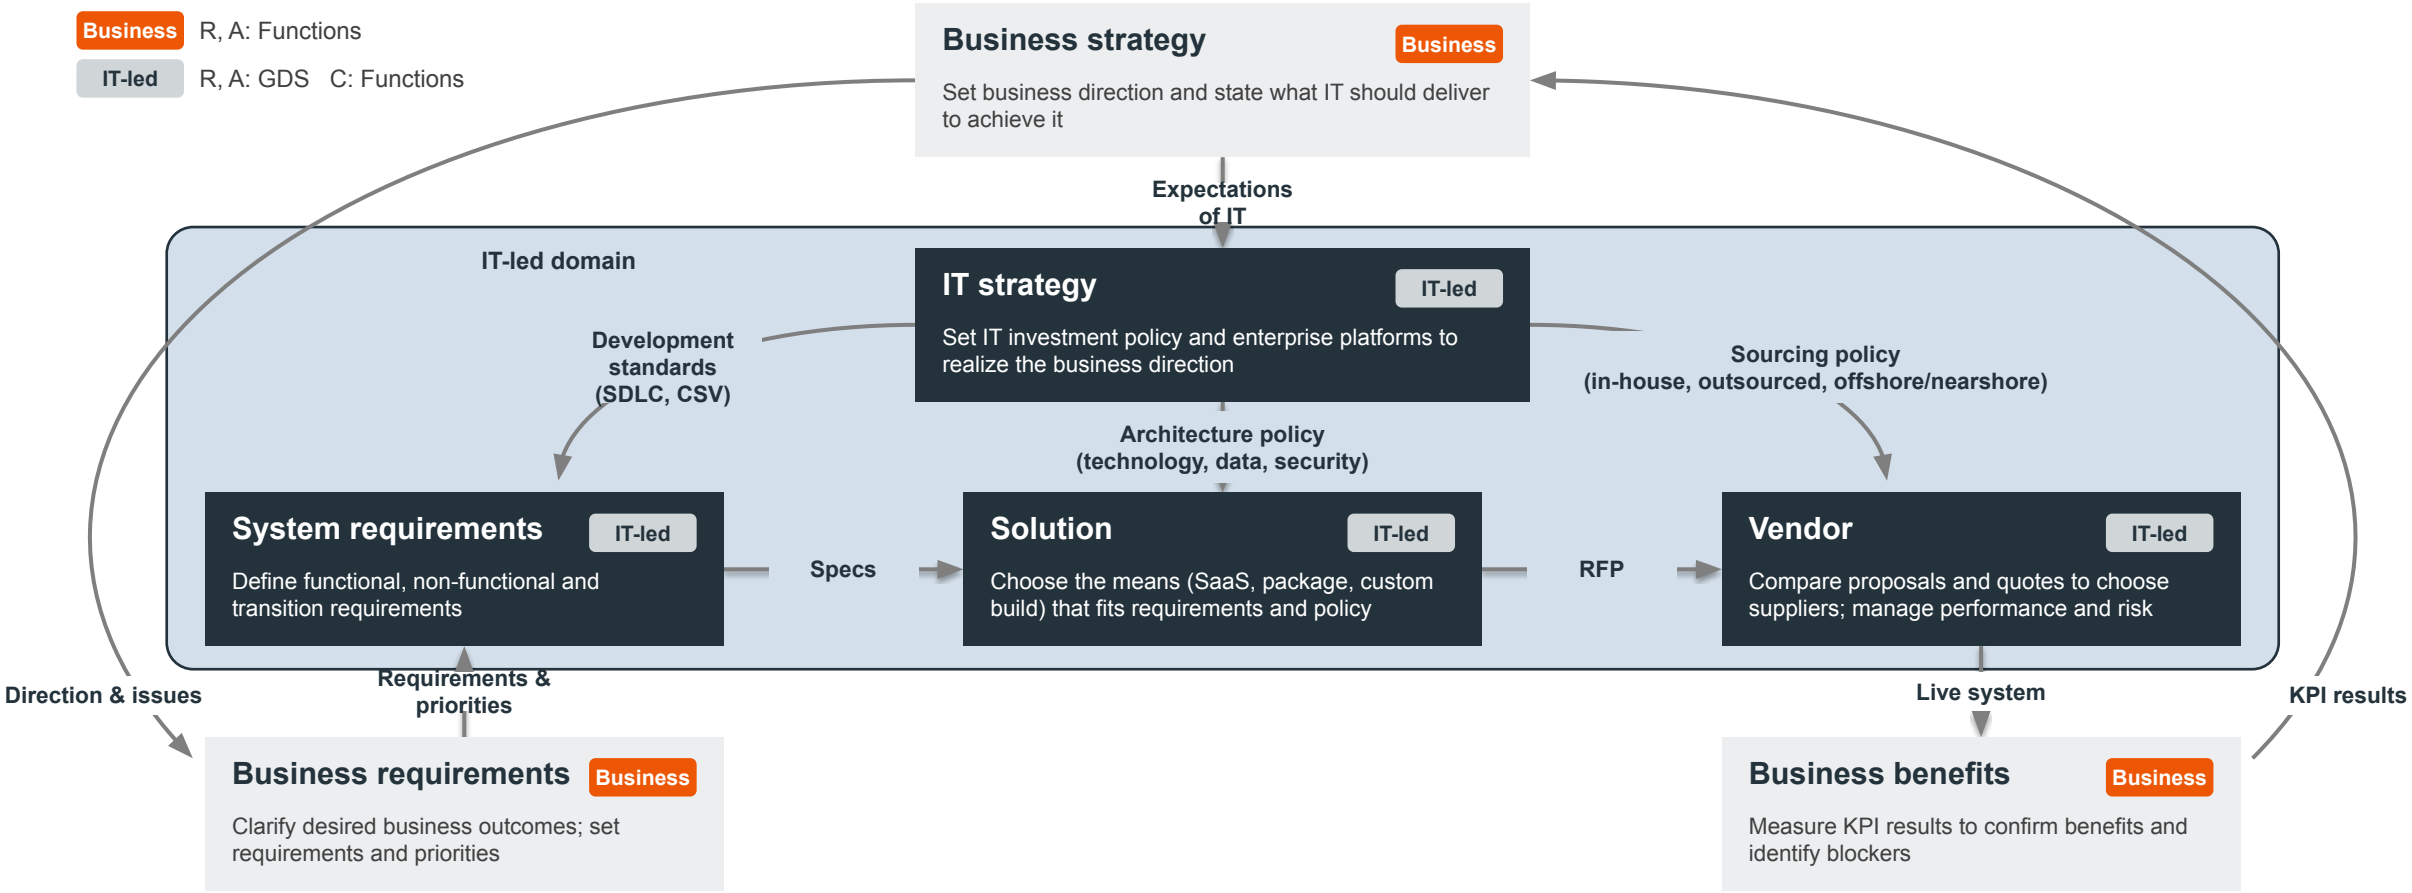

November–December Schedule (Indicative)

Orders needed this year can proceed where possible, without waiting for the transfer
Contract name changes can be made at a suitable time; they need not coincide with the transfer

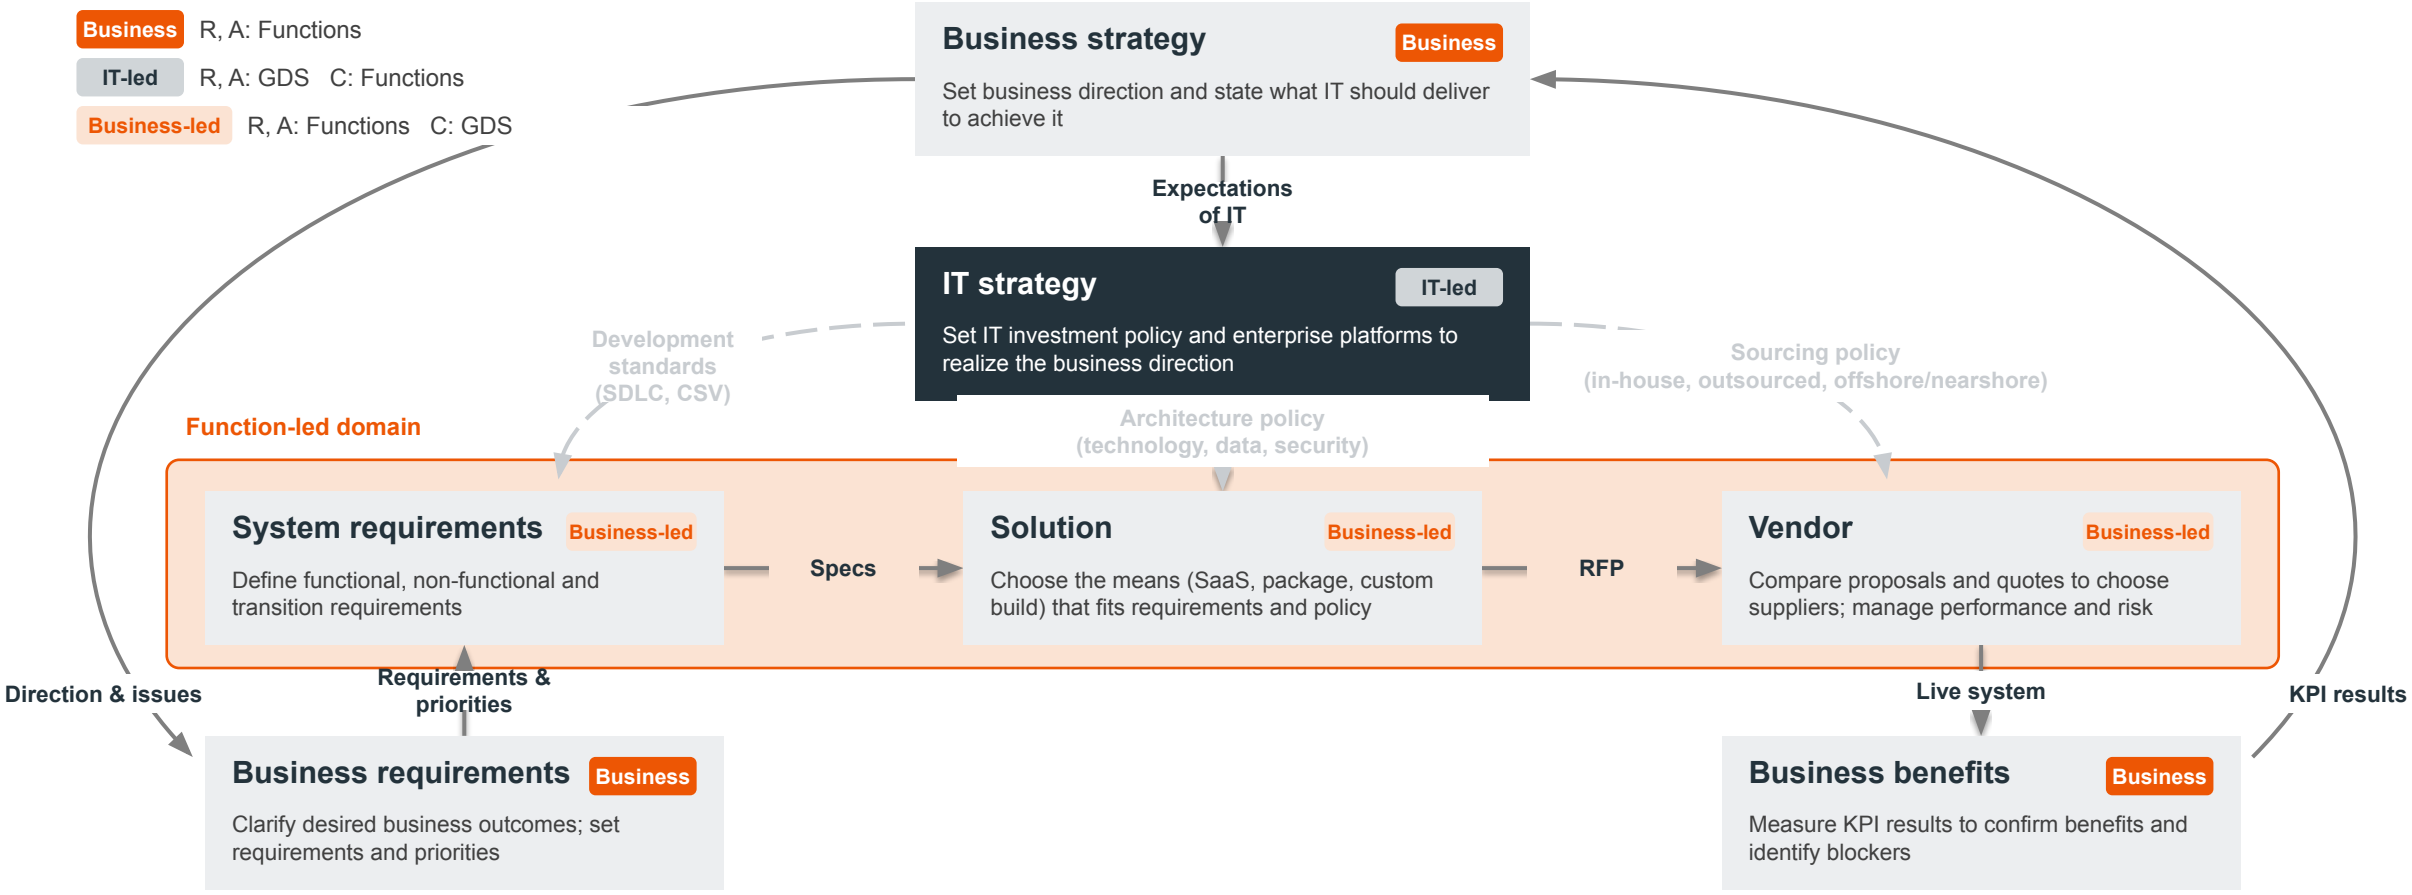

Roles After the Transfer (RACI)

In the IT domain, GDS and the Functions work together, with GDS leading to balance enterprise-wide and local needs
Cases confined to one Function continue to be led by that Function, with GDS in support

GDS is responsible for the indirect work tied to transferred budgets (budget, contracts, ordering and payment)

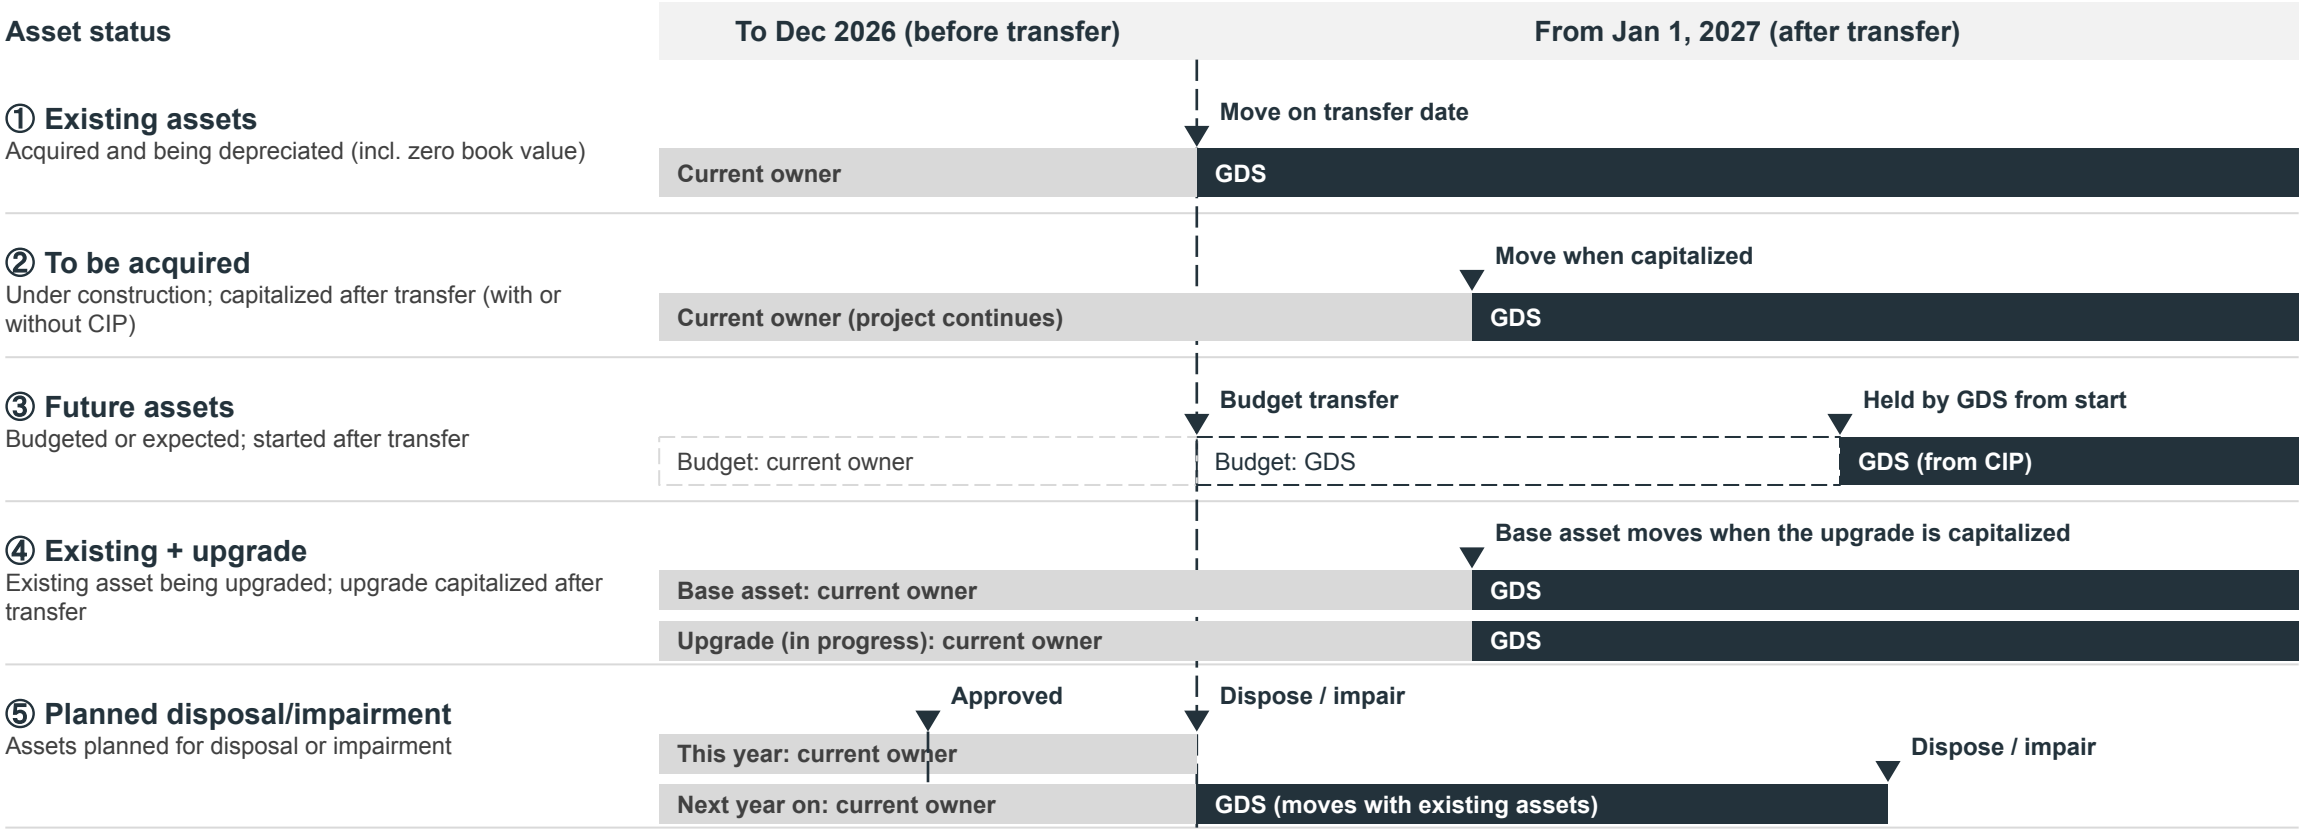

Alternative: Roles for Function-Specific Cases (RACI)

Where Function-led work runs more smoothly, carry on as before, but keep looking through the system lens
Is the same data entered twice? Are reports or data from elsewhere checked or fixed by hand? Does another Function contract the same tool?

Fixed Assets Move to GDS

All fixed assets from in-scope IT investments move to GDS. Timing depends on each asset's status at transfer
FinanceBP reassigns the depreciation budget with the assets; after transfer, depreciation is booked to GDS

Select assets to transfer from the register provided by Finance and return it; FinanceBP handles the transfer
